

SIEMENS
Ingenuity for life

Smooth porcelain surface for
a sensual experience

Siemens DELTA® seata switch and socket

Siemens DELTA® seata switch and socket

- Art decorates and inspires life, while classic taste withstands the challenges of time. Selected according to an exacting standard, and blended with classical craftsmanship, they become a living art, for an extraordinary user-experience that brightens up your life.

Ceramic is a sign of elegance. From pottery to porcelain, art is born in fire and baptized in water, achieving the pinnacle of aesthetic values.

- A selection of Kaolin clays go through a series of processes including clay-cutting, wedging, forming, leather hardening, and glaze firing, blending in wisdom throughout. It all enables the smooth and timeless quality of the ceramics.

The heart of ceramic art goes even beyond a perfect combination of thoughts and emotions, crafts and arts, history and reality. Inspired by nature and thousands of years of civilization, it comes to life.

Enjoy the art in life when switches meet ceramics

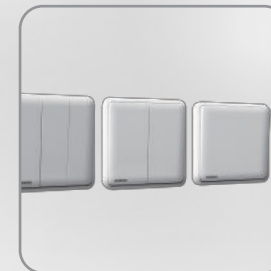

Delicate precision brings out
the best qualities of ceramics

Aesthetics

Smooth Frame

- The ingenious surface reflects the origins of the ceramic aesthetics. The clean design of the surface presents an excellent frame and dolly both visually and tactually.

The smooth combination between the frame and dolly creates minimalism with rich details.

Excellent PC material

- High-grade PC material is paired with high tensile strength, anti-abrasivity, both shock and fire-resistance.

Anti-UV materials are applied to keep the color on the switch surface from fading.

Anti-UV

Specially added anti-UV material

Toughness

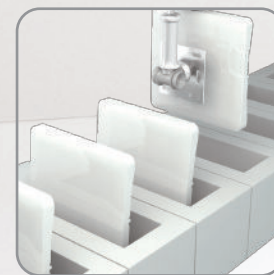

Craftsmanship

Mold polishing

Automated injection molding

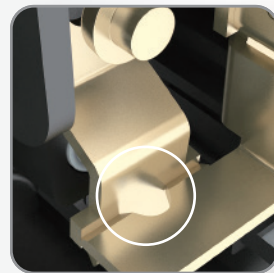

- Craftsmanship is inscribed in every step of production. Ceramic molding is precisely processed to get a smooth finish.

High-speed milling machines makes gloss surface finish possible. With repeated hand polishing, the mold achieves a mirror finish. The components of the mold are heated to a consistent temperature and pressure, making molding faster and smoother.

Automated injection molding makes clean, high-quality products.

Advancements in the details offer reassurance and longer service life.

Patented V-shaped groove design

- Effectively reduces the carbon deposit and potential temperature-related risks.

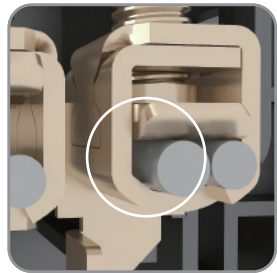

3.4mm-diameter design enlarges the silver contact

- Unique ultra-thick spherical design allows a larger contact area with the copper base, strengthening the binding force, and lowering electrical resistance and improving service life.

Safety

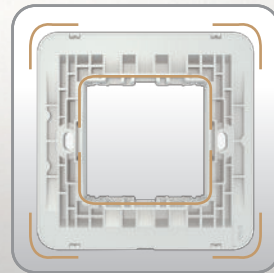

The newly designed saddle terminal

- Can effectively house wires of different diameters. Reliability of the termination is enhanced significantly with the addition of a dual-layered scratch resistant design, making installation easy.

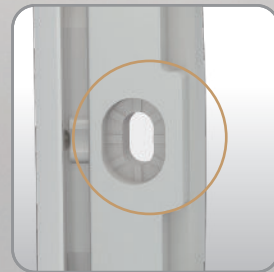

Adaptability

Stable center-frame design

- The compact frame structure bears high-pressure, making it difficult to distort and easy to install.

Patented anti-skid design at the mounting hole

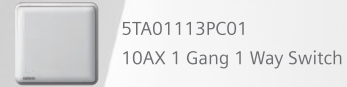

- A higher-friction surface makes it less likely to distort and improves solidity and reliability during installation.
